Physics

</>Physics in music
I am writing this lyric
to make unique this topic
Its fun to learn
about gravity & resistivity
Gravity is 9.8
Resistivity opposes the current to flow straight
Unit for current (I) is A
there is no other way
you just have to obey
Ammeter, Voltmeter, Galvanometer
Each unit has the name of its creator
For example
Newton and Pascal
Beacuse of their Physics excel
There is one thing that you can see
Physics has a family
Force is Ma & Pressure is Pa
Ye idea hai Chirag Sir ka
Motion has formulas 3
Free electrons karte charge carry
wherever in the world you go
cartisan's sign convention you have to follow
And current flows from high to low you have to know
light comming from far away travel only parallel
Difference between microscope and telescope
vuf and io was a joke
Tarun Sir we will miss
but remember that he taught this
Optical instruments in convex lense like camera
And spectacles to correct hypermetropia
Gravity $G \frac{m_1 m_2}{r^2}$
Barometer to measure the pressure of air
Ohm's Law V is equal to IR
Kahetey hain Chirag Sir
Work's unit erg and joule
Now Physics in my heart and soul
Yeah!
